

# MERZ water distributors – We take care of your water supply

- Securely lockable and sustainably reusable
- Standardised according to drinking water regulations
- Quick and clean installation
- Water distribution possible at any outdoor temperature
- Fittings protected by sturdy housing

# WATER DISTRIBUTOR MZW2

The modular design principle allows customised adaptation and thus maximum flexibility – exactly according to your requirements! Combine your tapping points according to your needs from three different tap types, e.g. to distribute water quickly and cleanly on your construction site. Let us insulate your water distributor and equip it with pipe trace heating to keep you operational at any temperature.

Art. No.: MZW2501300

Art. No.: MZW2690002

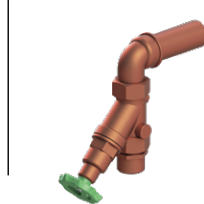

- All-round solution with up to 9 tapping points
- High variability thanks to 1 inch piping
- Weatherproof housing
- Swivelling crane lifting lugs and lateral carrying handles for easy moving
- Pipe trace heating (optional) for low ambient temperatures
- Additional insulation (optional) for frost-proof sheathing of the pipes
- Lockable to hinder water theft

Tell us your desired configuration and we will customise your water distributor individually.

# THE RIGHT SOLUTION FOR EVERY APPLICATION.

## CONSTRUCTION

No other element is used on the construction site as often as water: mixing plaster, cleaning work or making the morning coffee. This makes clean and efficient water distribution all the more important. The water distribution concept always has to look different, depending on the construction period and the requirements of the construction site. Our water distribution system adapts to your individual requirements and needs.

## EVENTS

Operation of sanitary facilities, preparation of food in the kitchen and the provision of water for various cleaning tasks are typical applications at a fair, Christmas market or other events. With our water distributor, you get the water you need not only at the right place and the right time, but also in the right quality!

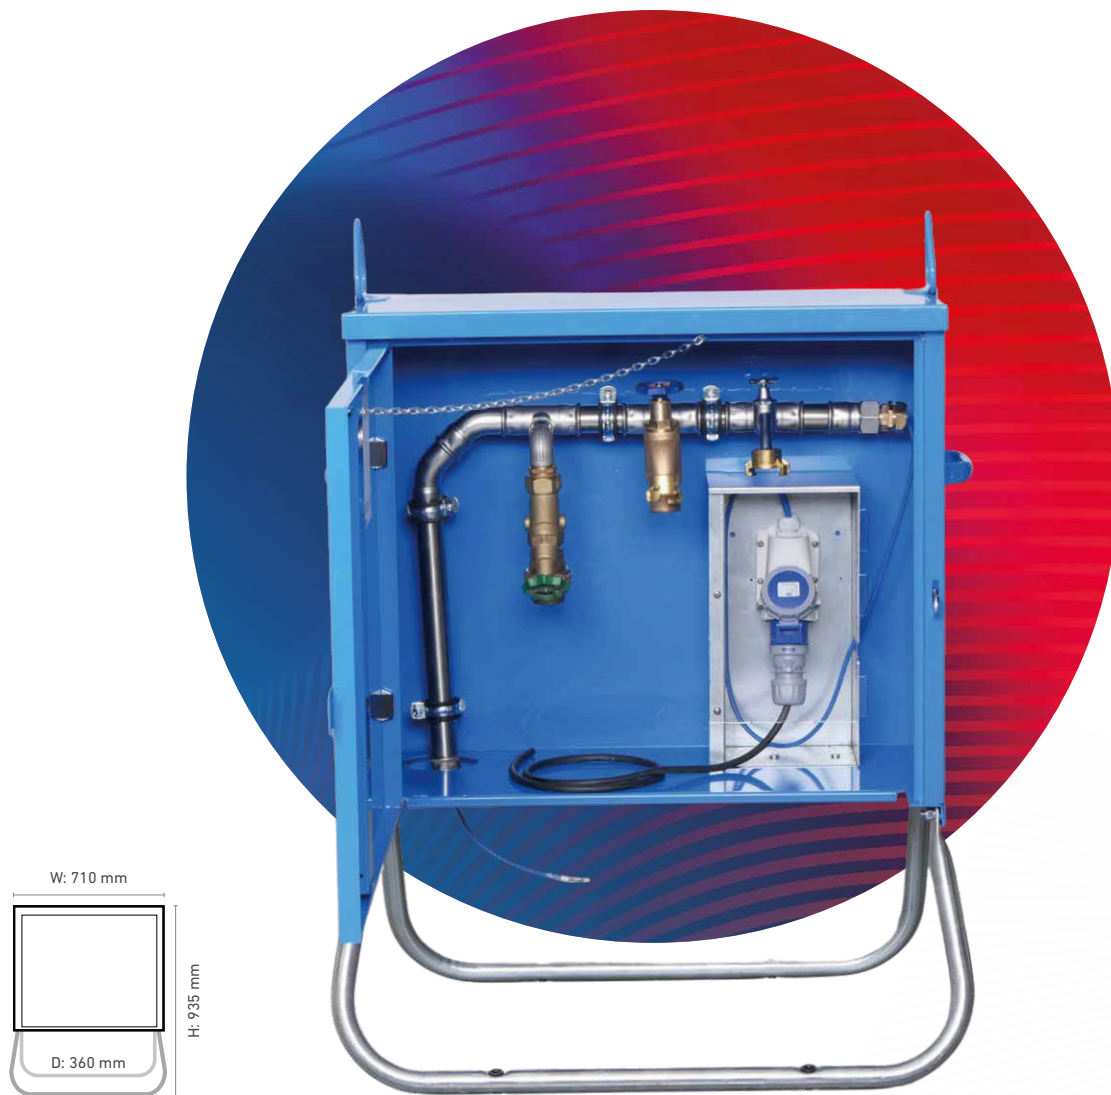

## TEMPORARY LIVING AND WORKING FACILITIES

Water means life. Water is needed wherever there is life, be it in container parks, temporary housing facilities such as refugee camps or army mobile hospitals. Clean water needs particular attention for these applications. MERZ water distributors allow you to draw water at any time without contaminating the drinking water in the supply line.

# WATER DISTRIBUTOR MZW3

With the water distributor MZW3, MERZ offers a compact and handy alternative for distributing water with up to 3 tapping points, such as on your construction site. An optional internal heater prevents the water pipe from freezing.

Art. No.: MZW3030000

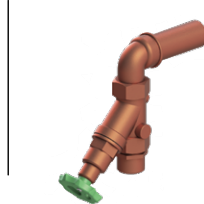

- Cost-effective and practical water distribution
- DN32 piping of stainless steel with press fitting (M contour)
- Weatherproof housing
- Swivelling crane lifting lugs and lateral carrying handles for easy moving
- Variability of pipe and heater length allows electrical connection on site
- Internal heater can be retrofitted at any time.
- Lockable to hinder water theft
